Corrections

Mindea SA, Klimko A, Ghiuve-Osman F, Bouros D, Pop MM, Mindea I. "ULTRA" lateral decompression technique for lumbar discectomy: an evaluation of 30-day outcomes from an 8-year single surgeon experience. *Int J Spine Surg*. 2026;20(3):399-406. https://doi.org/10.14444/8883

The authors report that the following errors in their article:

- The Conclusion on page 405 incorrectly states that there was a 0.3% infection rate, but it should have stated that there were no surgical site infections, as reported in the Abstract and Results.

- The Conclusion on page 405 incorrectly states that there was a mean 53-point ODI (Oswestry Disability Index) improvement, but it should have stated that there was a mean 56-point ODI improvement, as reported in the Abstract and Results.

- A typographical error appears in the first affiliation on page 399. Constata, Romania, should have appeared as Constanța, Romania.

These change have been made in the full text and PDF files of the article. (doi:10.14444/8883.cxx)
