Rx Only. Refer to product instruction manual/package insert for instructions, precautions, cautions, warnings, and contraindications. For further information, please contact Medtronic at (877) 242-9504, and/or consult Medtronic's website at www.Medtronic.com

The Mazor X™ is indicated for precise positioning of surgical instruments or spinal implants during general spinal surgery. It may be used in open or minimally invasive or percutaneous procedures. Mazor X™ 3D imaging capabilities provide a processing and conversion of 2D fluoroscopic projections from standard C-arms into a volumetric 3D image. It is intended to be used whenever the clinician and/or patient benefits from generated 3D imaging of high contrast objects. The Mazor X™ navigation tracks the position of instruments, during spinal surgery, in relation to the surgical anatomy and identifies this position on diagnostic or intraoperative images of a patient.

The commercial name of Mazor™ is Mazor X Stealth™ Edition.
